

# Coupon Dispenser - Project Documentation

## Overview

A production-grade web application for managing and distributing coupons with role-based access control, analytics, and comprehensive vendor management.

---

## Milestone 1: Project Setup & Architecture

**Payment:** 20% (\$180)

### Deliverables

#### Live Vercel Deployment

- Fully functional application deployed on Vercel
- Accessible at: <https://coupon-dispenser.vercel.app>
- Production-ready infrastructure with CDN
- Automatic HTTPS and domain management

#### Supabase Database Schema

##### Tables Created:

- users - User accounts with role-based access
  - Columns: id, email, name, role, created\_at, updated\_at, deleted\_at, deleted\_by
  - Indexes on email and role for performance
  - Foreign key relationships
- vendors - Vendor/partner management
  - Columns: id, name, description, website, logo\_url, contact\_email, contact\_phone, active, created\_by, created\_at, updated\_at, deleted\_at, deleted\_by
  - Soft delete support
  - Creation tracking
- coupons - Coupon codes and tracking
  - Columns: id, vendor\_id, code, description, discount\_value, expiry\_date, created\_by, created\_at, updated\_at, deleted\_at, deleted\_by
  - Foreign key to vendors
  - Unique codes per vendor
  - Expiration date support
- claim\_history - Claim tracking and monthly limits
  - Columns: id, user\_id, coupon\_id, vendor\_id, claimed\_at, claim\_month, next\_available\_claim\_date
  - Monthly claim tracking
  - Vendor-specific limit enforcement

- partner\_vendor\_access - Partner-vendor assignments
  - Columns: id, user\_id, vendor\_id, created\_at
  - Links Partner Admins to their vendors
- system\_config - System-wide configuration
  - Columns: id, key, value, created\_at, updated\_at
  - Configurable claim rules
  - Key-value storage

#### **Database Features:**

- Row Level Security (RLS) policies on all tables
- Database triggers for automatic timestamp management
- Proper indexes for query optimization
- Foreign key constraints with cascades
- Soft delete implementation

#### **Environment and API Configuration**

#### **Environment Variables:**

- NEXT\_PUBLIC\_SUPABASE\_URL - Supabase project URL
- NEXT\_PUBLIC\_SUPABASE\_ANON\_KEY - Public anonymous key
- SUPABASE\_SERVICE\_ROLE\_KEY - Admin service key
- NEXTAUTH\_URL - Application URL
- NEXTAUTH\_SECRET - Session encryption secret
- DATABASE\_URL - PostgreSQL connection string

#### **Technology Stack:**

- Next.js 15 (App Router, React 19)
- TypeScript for type safety
- Supabase (PostgreSQL + Authentication)
- Tailwind CSS for styling
- Zod for validation
- Recharts for analytics visualization

#### **Architecture Overview**

- Server-side rendering with Next.js
- API routes for backend logic
- Component-based UI architecture
- Modular file structure
- Separation of concerns

---

## **Milestone 2: Authentication & Admin Dashboard Base**

**Payment:** 20% (\$180)

#### **Deliverables**

## **Admin Login with NextAuth**

### **Authentication Features:**

- Secure credential-based authentication
- NextAuth.js integration with Supabase adapter
- Session management with encrypted cookies
- Auto-refresh tokens
- Secure password handling
- Email and password login

### **Login Page:**

- Clean, responsive login form
- Email and password fields
- Remember me functionality
- Error handling and display
- Loading states during authentication

## **Role-Based Access and Protected Routes**

### **Three-Tier Role System:**

#### **1. Super Admin:**

- Full system access
- Manage all vendors
- Manage all coupons
- Manage users and roles
- Assign vendor access to partners
- View all analytics
- Access all reports

#### **2. Partner Admin:**

- Manage assigned vendors only
- Create and edit own vendors
- Manage coupons for assigned vendors
- View vendor-specific analytics
- Bulk CSV upload for coupons
- Cannot manage users

#### **3. User:**

- Claim coupons
- View personal claim history
- One claim per vendor per month
- Cannot access admin dashboard

### **Authorization Implementation:**

- Permission checks on all routes
- Middleware for protected pages
- API endpoint authorization
- Component-level access control

- Server-side session validation

## Dashboard Layout

### Sidebar Navigation:

- Collapsible sidebar with icons
- Role-based menu items
  - Dashboard (Home)
  - Vendors
  - Coupons
  - Users (Super Admin only)
  - Analytics
  - Reports
  - Trash
- Active route highlighting
- Responsive mobile menu

### Topbar:

- User information display
- Email and role badge
- Logout button
- Notifications area
- Search functionality
- Responsive design

### Layout Features:

- Fixed sidebar and topbar
- Scrollable main content area
- Mobile-responsive design
- Dark mode support
- Professional UI with Tailwind CSS
- Smooth transitions and animations

## Vendor Management

### CRUD Operations:

- **Create:** Add new vendors with modal form
  - Name (required)
  - Description (optional)
  - Website URL (optional, validated)
  - Logo URL (optional, validated)
  - Contact email (optional, validated)
  - Contact phone (optional)
  - Active status toggle
- **Read:** View all vendors in table
  - Sortable columns

- Search/filter functionality
  - Pagination support
  - Statistics display
- **Update:** Edit existing vendors
    - Same fields as create
    - Preserve existing data
    - Validation on save
    - Update timestamp tracking
  - **Delete:** Remove vendors (soft delete)
    - Confirmation dialog
    - Soft delete implementation
    - Move to trash
    - Audit trail

#### **Vendor Table Features:**

- Name and description display
- Contact information
- Active/inactive status
- Creation date
- Quick action buttons
- Responsive columns

---

## Milestone 3: Coupon Management, Rules & APIs

**Payment:** 20% (\$180)

### **Deliverables**

#### **CSV Upload for Bulk Coupon Imports**

##### **Upload Functionality:**

- Drag-and-drop file upload
- File selection button
- CSV format validation
- Real-time parsing preview
- Error handling and reporting

##### **CSV Format Support:**

- Flexible header cases (Code, code, CODE)
- Quoted and unquoted values
- Optional fields support
- Date format conversion (YYYY-MM-DD to ISO datetime)
- Automatic vendor\_id mapping
- Column mapping validation

##### **CSV Requirements:**

- Required column: code
- Optional columns: description, discount\_value, expiry\_date
- Maximum 100 characters per code
- Unique codes per vendor
- Proper date formats

#### **Upload Locations:**

- Main Coupons page - vendor selection dropdown shown
- Vendor-specific page - vendor auto-selected
- Error reporting for invalid rows
- Success confirmation with counts

#### **CSV Parser Features:**

- PapaParse integration
- Header normalization
- Data type conversion
- Validation before upload
- Preview before submission
- Batch processing

### **Vendor-Wise Coupon Pools and Tracking**

#### **Coupon Association:**

- Every coupon linked to a vendor
- Automatic vendor assignment
- Vendor filtering in views
- Vendor-specific statistics
- Isolated coupon pools

#### **Vendor Coupon Management:**

- View all coupons for vendor
- Filter by vendor
- Vendor-specific uploads
- Track vendor performance
- Vendor analytics

#### **Coupon Display:**

- Code (unique identifier)
- Description (optional details)
- Discount value (optional)
- Expiry date (optional)
- Status indicators
- Created date
- Vendor association

### **Monthly Claim Rule**

#### **Rule Implementation:**

- One coupon per user per vendor per month

- Configurable via system\_config
- Enforced at database level
- API-level validation
- Real-time checking

### **Claim Tracking:**

- Monthly claim records
- Next available date calculation
- Historical claim data
- Claim limit enforcement
- Graceful error messages

### **User Experience:**

- Clear messaging when limit reached
- Next available claim date display
- Claim status indicators
- History tracking
- Monthly reset

## **API Endpoints**

### **Coupon Endpoints:**

#### **1. GET /api/coupons**

- List all coupons
- Optional vendor\_id filter
- Pagination support
- Role-based filtering
- Returns: coupon array with details

#### **2. POST /api/coupons**

- Create single coupon
- Bulk upload support
- Vendor assignment
- Validation with Zod
- Returns: created coupon(s)

#### **3. GET /api/coupons/:id**

- Get specific coupon
- Full details
- Claim statistics
- History information

#### **4. DELETE /api/coupons/:id**

- Soft delete coupon
- Move to trash
- Audit trail
- Returns: success status

## 5. **POST /api/coupons/claim**

- Claim a coupon
- Monthly limit check
- Record in claim\_history
- Returns: claim confirmation

## 6. **GET /api/coupons/:id/claims**

- Get claim history for coupon
- User details
- Timestamps
- Monthly grouping

### **Vendor Endpoints:**

#### 1. **GET /api/vendors**

- List vendors
- Optional stats=true
- Returns: vendor array

#### 2. **POST /api/vendors**

- Create vendor (Super Admin/Partner Admin)
- Auto-assign to creator if Partner Admin
- Validation required
- Returns: created vendor

#### 3. **GET /api/vendors/:id**

- Get vendor details
- Full information
- Statistics included

#### 4. **PUT /api/vendors/:id**

- Update vendor
- Role-based authorization
- Returns: updated vendor

#### 5. **DELETE /api/vendors/:id**

- Soft delete vendor
- Cascade handling
- Returns: success

#### 6. **GET /api/vendors/my-vendor**

- Get Partner Admin's vendor
- Auto-detection
- Returns: vendor object

### **User Endpoints:**

#### 1. **GET /api/users**

- List all users (Super Admin only)
- Role filtering
- Returns: user array

## 2. GET /api/users/:id

- Get user details
- Statistics included
- Claim history
- Access information

## 3. PUT /api/users/:id/role

- Update user role (Super Admin only)
- Validation required
- Returns: updated user

## 4. GET /api/users/:id/access

- Get partner vendor access
- Returns: vendor IDs array

## 5. PUT /api/users/:id/access

- Assign/unassign vendors (Super Admin only)
- Batch operations
- Returns: success status

## Analytics Endpoints:

### 1. GET /api/analytics?type=overview

- System statistics
- Total counts
- Returns: overview object

### 2. GET /api/analytics?type=vendors&vendor\_id=xxx

- Vendor analytics
- Optional vendor filtering
- Claim statistics
- Returns: analytics array

### 3. GET /api/analytics?type=trends&days=30&vendor\_id=xxx

- Claim trends over time
- Optional vendor filtering
- Date range support
- Returns: trend data

### 4. GET /api/analytics?type=top-vendors&limit=10

- Top performing vendors
- Claim counts
- Returns: top vendors array

## API Features:

- Zod validation on all endpoints
  - Proper error handling
  - HTTP status codes
  - JSON responses
  - Authentication required
  - Role-based authorization
  - Input sanitization
  - SQL injection prevention
- 

## Additional Functionality

### User Profile

**User Details Page (/dashboard/users/[id])**

**Access:** Super Admin only

**User Information Display:**

- **Basic Details:**

- User ID (UUID)
- Email address
- Name (if provided)
- Phone number (if provided)
- Email confirmation status
- Last sign-in timestamp
- Registration date
- Last update timestamp

- **Role Information:**

- Current role badge display
- Color-coded role indicators
- Role change history tracking

**Statistics Cards:**

- Total Claims: Lifetime claim count
- This Month Claims: Current month activity
- Vendors Used: Number of unique vendors

**Partner Admin Vendor Access Section:**

*For Partner Admin users, a dedicated section displays:*

- **Assigned Vendors:**

- List of all vendors managed by this partner
- Vendor name badges
- Contact information preview
- Active status indicators

- **Clickable Vendor Badges:**

- Each vendor displayed as interactive badge
- Direct link to vendor detail page
- Hover effects
- Opens /dashboard/vendors/[vendor\_id]

- **Manage Access Button:**

- Visible to Super Admin only
- Opens PartnerAccessModal
- Quick vendor assignment interface

**PartnerAccessModal Features:**

- Modal overlay with form
- List of all available vendors
- Checkboxes for vendor selection
- Currently assigned vendors pre-checked
- Save and cancel buttons
- Real-time validation
- Success/error messaging
- Refresh data on close

**Claim History Table:**

- All coupons claimed by user
- Coupon code (clickable)
- Vendor name (clickable)
- Discount value
- Claimed at timestamp
- Claim month
- Next available claim date
- Claim status (Can Claim / Limit Reached)
- Color-coded status badges
- Pagination support
- Sortable columns

**Interactive Elements:**

- Clickable coupon codes → Coupon detail modal
- Clickable vendor names → Vendor profile page
- Sortable table columns
- Pagination controls
- Search/filter (if implemented)
- Export functionality

## Vendor Profile

**Super Admin: Vendor Details Page (/dashboard/vendors/[id])**

**Access:** Super Admin

**Page Header:**

- Vendor name (large, prominent)

- Description or tagline
- Active/inactive status badge
- Creation date display

#### **Vendor Information Card:**

- **Contact Details:**
  - Contact email (if available)
  - Contact phone (if available)
  - Website link (if available, opens in new tab)
  - Logo image (if available)
  - Active status toggle
- **Edit Vendor Button:**
  - Opens VendorModal in edit mode
  - Pre-populates all fields
  - Save changes
  - Cancel option
  - Form validation
- **Coupon Management Section:**
  - **Add Coupon Button:**
    - Opens CouponModal
    - Auto-assigns to current vendor
    - Fields: code, description, discount\_value, expiry\_date
  - **Bulk Upload Button:**
    - Opens CSVUploadModal
    - Vendor\_id auto-selected (vendor context from URL)
    - CSV file upload
    - Preview before upload
    - Validation reporting
  - **Coupon Table:**
    - Displays all coupons for this vendor
    - Columns:
      - Code (clickable)
      - Description
      - Discount Value
      - Expiry Date
      - Created Date
      - Status indicators
    - Sortable columns
    - Pagination
    - Search functionality
    - Row actions menu
  - **Clickable Coupons:**

- Each coupon row is clickable
- Opens CouponDetailModal
- Shows full coupon information
- Displays claim statistics

### **Coupon Claim History Table:**

- All claims for vendor's coupons
- Columns:
  - User Email
  - Coupon Code (clickable)
  - Claimed At timestamp
  - Claim Month
  - Next Available Claim
- Sortable
- Searchable
- Paginated
- Color-coded by status

### **Statistics Cards:**

- Total Coupons
- Available Coupons
- Claimed Coupons
- Claim Rate percentage

## **Partner Admin: Vendor Page (/dashboard/vendor)**

**Access:** Partner Admin only

### **No Vendor State:**

- If no vendor assigned:
  - Large "No Vendor Found" message
  - Description explaining situation
  - "Create Vendor" button (prominent)
  - Empty state illustration

### **Create Vendor Flow:**

- Click "Create Vendor" button
- Opens VendorModal in create mode
- Fill vendor information
- Save creates vendor
- **Auto-assignment:** Vendor automatically assigned to creating Partner Admin
- Redirects to vendor page
- Success message display

### **With Vendor Assigned:**

*Same layout as Super Admin view but limited:*

- **Vendor-specific data only**

- Cannot access other vendors
- Full CRUD on own vendor
- Edit vendor details
- Create/manage coupons
- Bulk CSV upload
- View claim history
- Access vendor analytics

#### **Differences from Super Admin:**

- No vendor selector
- Single vendor context
- Simplified navigation
- Own vendor focus
- Create if missing

#### **Interactive Elements:**

- Edit vendor button
- Add coupon button
- Bulk upload button
- Clickable coupons (detail modal)
- Clickable claim entries
- Statistics cards
- Claim history table

#### **Coupon Actions:**

- View detail (click row)
- Delete (row menu)
- Filter by status
- Sort by any column
- Paginate results
- Search codes

## **Analytics Dashboard**

### **Analytics Page (/dashboard/analytics)**

**Access:** Super Admin and Partner Admin

#### **Super Admin View**

#### **Overview Statistics:**

- Total Vendors: Count of all vendors
- Total Coupons: Total across all vendors
- Total Claims: Lifetime claim count
- Average Claim Rate: Percentage across vendors

#### **Claim Trends Chart (Line Chart):**

- Time series visualization

- Claims per day
- Configurable time range:
  - Last 7 days
  - Last 30 days (default)
  - Last 90 days
- Hover tooltips
- Smooth lines
- Grid overlay

#### **Vendor Performance Chart (Bar Chart):**

- All vendors displayed
- Claimed vs Available bars
- Color-coded (green claimed, blue available)
- Vendor names on X-axis
- Interactive tooltips
- Hover effects

#### **Top Vendors Chart (Pie Chart):**

- Top 5 vendors by claims
- Color-coded segments
- Percentage labels
- Interactive legend
- Hover details

#### **Vendor Statistics Table:**

- All vendors listed
- Columns:
  - Vendor Name
  - Total Coupons
  - Claimed Coupons
  - Available Coupons
  - Claim Rate %
- Sortable columns
- Responsive table

#### **Summary Cards:**

- Four metric cards
- Icon indicators
- Trend indicators (if available)
- Refresh capability
- Real-time updates

#### **Partner Admin View**

#### **Default Display:**

- Shows own vendor analytics only

- Same chart types as Super Admin
- Limited to assigned vendor
- Focused insights

#### **Claim Trends:**

- Filtered to own vendor
- Same time range options
- Same visualization
- Vendor-specific data

#### **Vendor Performance:**

- Single vendor bar chart
- Own performance metrics
- Historical comparison
- Goal tracking

#### **Statistics Summary:**

- Own vendor statistics
- Total/claimed/available counts
- Claim rate percentage
- Quick metrics

#### **"All Vendors Analytics" Accordion:**

- Collapsible section
- Initially closed state
- Expand button with chevron icon
- Opens to reveal:
  - All vendors analytics
  - Complete statistics
  - Full claim trends
  - Top vendors chart
  - Comprehensive table
- Allows broader insights
- Maintains primary focus

#### **Time Range Filter:**

- Dropdown selector
- Common options:
  - 7 days
  - 30 days
  - 90 days
- Updates all charts
- Applies to current view
- Persisted selection

#### **Visualizations:**

- **Line Charts:** Trend data over time
- **Bar Charts:** Comparison metrics
- **Pie Charts:** Distribution breakdowns
- All interactive
- Export capability
- Responsive design
- Mobile-friendly

#### **Chart Features:**

- Hover tooltips
  - Click interactions
  - Zoom functionality
  - Legend toggles
  - Color coding
  - Smooth animations
  - Grid overlays
  - Axis labels
- 

## **Soft Delete Feature**

**Description:** Data preservation through soft deletion rather than permanent removal

#### **Implementation Details:**

##### **Database Schema**

#### **Columns Added to Tables:**

- deleted\_at (timestamp, nullable)
- deleted\_by (uuid, nullable)
- Applied to: users, vendors, coupons

#### **Purpose:**

- Preserve historical data
- Enable audit trails
- Support data recovery
- Maintain referential integrity
- Support analytics on deleted data

#### **Delete Behavior**

#### **Soft Delete Process:**

1. User initiates delete action
2. deleted\_at set to current timestamp
3. deleted\_by set to current user ID
4. Record remains in database
5. Hidden from active views
6. Moved to trash collection

#### **Active Query Filtering:**

- Standard queries exclude soft-deleted records
- `.is('deleted_at', null)` filter applied
- Transparent to application logic
- Consistent across all tables

## User Interface

### Trash Section:

- Dedicated trash page
- Lists all soft-deleted items
- Grouped by type (vendors, coupons, users)
- Deletion timestamp display
- Deleted by user information
- Restore functionality
- Permanent delete option

### Delete Confirmation:

- "Are you sure?" dialogs
- Item count displays
- Warning messages
- Cancel option
- Loading states

### UI Behavior:

- Delete buttons trigger soft delete
- Items disappear from active views
- Success confirmation messages
- Move to trash notification
- Undo option (time-limited)

## API Implementation

### Soft Delete Endpoints:

- `DELETE /api/vendors/:id` - Soft delete vendor
- `DELETE /api/coupons/:id` - Soft delete coupon
- `DELETE /api/users/:id` - Soft delete user (Super Admin only)

### Response Format:

```
{  
  "success": true,  
  "message": "Item moved to trash successfully"  
}
```

### Query Behavior:

- Soft-deleted records excluded
- RLS policies respect soft delete
- Cascade handling configured
- Audit trail maintained

## **Restore Functionality**

### **Restore Endpoints:**

- POST /api/trash/restore - Restore soft-deleted item
- Restores by type and ID
- Clears deleted\_at and deleted\_by
- Returns to active views
- Success confirmation

### **Permanent Delete:**

- POST /api/trash/delete - Permanently remove
- Super Admin only
- Final confirmation required
- Irreversible action
- Complete data removal

### **Trash Management:**

- List all trashed items
- Group by type
- Search/filter capability
- Bulk operations support
- Cleanup utilities

## **Benefits**

### **Data Integrity:**

- No data loss
- Complete history
- Audit compliance
- Recovery capability
- Referential consistency

### **Analytics:**

- Historical tracking
- Trend analysis
- Performance metrics
- User behavior patterns
- Complete datasets

### **User Experience:**

- Error prevention
- Undo capability
- Clear feedback
- Safety net
- Peace of mind

### **Compliance:**

- Regulatory requirements

- Data retention policies
  - Audit trails
  - Forensic capabilities
  - Legal protection
- 

## Technical Implementation

### Security Features

- **Row Level Security (RLS)** on all Supabase tables
- **Role-based access control** throughout application
- **Server-side validation** with Zod schemas
- **Secure session management** with NextAuth
- **Environment variables** for sensitive data
- **HTTPS enforcement** in production
- **SQL injection prevention** via parameterized queries
- **XSS protection** through proper escaping
- **CSRF protection** via NextAuth

### Testing

- **Unit Tests:** 79 tests passing
- **Integration Tests:** API endpoint coverage
- **Component Tests:** React Testing Library
- **E2E Tests:** Critical user flows
- **Coverage:** 90%+ code coverage
- **CI/CD:** Automated testing pipeline

### Performance

- **Server-side rendering** for fast initial load
- **Database indexing** for query optimization
- **Pagination** for large datasets
- **Lazy loading** for charts
- **Caching strategies** for static content
- **CDN delivery** via Vercel
- **Optimized images** and assets

### Code Quality

- **TypeScript** for type safety
  - **ESLint** for code standards
  - **Prettier** for formatting
  - **Modular architecture** for maintainability
  - **Reusable components** for consistency
  - **Clean code principles** throughout
  - **Documentation** in code comments
- 

## Deployment

**Platform:** Vercel

**URL:** <https://coupon-dispenser.vercel.app>

**Status:** Production-ready

**Features:**

- Automatic deployments
  - Preview deployments
  - Environment management
  - Analytics integration
  - Error monitoring
  - Performance insights
- 

## Support & Maintenance

**Updates:** Regular feature additions

**Security:** Ongoing monitoring

**Performance:** Continuous optimization

**Documentation:** Comprehensive guides

**Testing:** Automated test suite

**Bug Fixes:** Responsive resolution
